

Advance Tax is the tax program for the future, as experienced by the growing legion of fans in the Australian professional accounting market.

It works to make the whole tax return process simpler and more efficient; even checks for errors as you go.

As with all elements of the Advance suite, it integrates seamlessly with the Practice Management database to ensure all the information about a client can be accessed without having to switch between programs.

Advance Tax provides a flexible workflow solution to help practices manage their tax lodgement deadlines, including

an automated alerting tool which warns of upcoming lodgement dates before they become an issue.

Unique to APS, the integrated PAYG module gives accountants an opportunity to discuss the tax payment options available to their clients; it automatically produces one of 33 different letters and tax timelines specific to the taxpayer's circumstances outlining their obligations and options.
