aps Accountable Technology

Citrix
Recommended environment - XenApp 6 or 6.5, Citrix Receiver 12.1. As a guideline each application server should limit the number of concurrent user connections to between 30 and 35, 4 GB of memory minimum and a 2 GHZ dual core processor

SBS
SBS 2008 or 2011 (Small Business Server) currently has 2 editions. Use this web site http://www.microsoft.com/sbs/en/us/editions-overview.aspx to make the correct choice given the applications you will be using. We strongly recommend that you choose the Premium edition.
Practice IQ requires SBS Premium and the PIQ web site must be run on the secondary server.

Desktop Operating System
Win XP Professional SP3, Vista, Win 7. 2 GB memory minimum, 160 GB disk minimum depending on other Applications installed.

Virtual Servers
The design of a virtual server environment is prepared by IT Infrastructure Specialists in consultation with their client. Every situation will be different. Our applications expect to be provided with the equivalent environments as if there were physical servers hosting the applications.

Notes *****
* All **hardware recommendations** are minimum guidelines for Advance applications only. * **Shaded areas** denote that the cell is 'Not Applicable' or defined by a pre-requisite. * **There is a printing issue using IE9 on Windows Server 2008 R2 Terminal Server**. It affects the printing of web pages hosted within any Advance console under certain conditions. This issue has been acknowledged by Microsoft to be an issue within IE9 and they are currently working on a resolution. Microsoft recommends downgrading to IE8 until this is resolved.

DesktopSuper
.NET Framework 4.0 is now required. This version of the framework does NOT replace previous versions.
