

Who would have thought
that you could
manage your practice
from **anywhere**
at **anytime**?

We would have.

Introducing the APS Private Cloud.

All you need is an internet connection and you can access our Advance software suite to control and manage your practice – anytime, anywhere.

The APS Private Cloud provides an on-demand IT infrastructure comprising servers, storage, backups, applications and existing products, all managed by APS and delivered via the internet.

The benefits are clear;

- Practice applications and data are accessible from anywhere at any time.
- Data is constantly backed up in a managed, secure, purpose built data centre.
- Your IT complexity and overhead costs are significantly reduced.
- Software and application upgrades are managed for you.
- The system supports access via mobile devices, tablets, laptops and PCs.

Add to these benefits the overall APS experience; a relationship based engagement with a team of experts who are accountable for delivering quality technology and great outcomes to our clients.

Explore the opportunities with APS and our Private Cloud.
