

Introducing the NEW Advance Tax.

With a new design, new interface,
new useability and new efficiencies,
the only thing that hasn't changed
is our superior support.

APS introduces an evolution in tax software to the accounting industry - Advance Tax.

Developed over many years, APS worked closely with the Australian Taxation Office as part of their software developers consultative group to ensure all relevant tax requirements were considered in the new Advance Tax application. The end result is the next generation in tax software – a superior, accurate and efficient tax preparation tool and the new essential application for accounting practices

How is Advance Tax different to other tax applications on the market?

- Gathers more information than ever before, meaning less work in return preparation.
- More accurate calculations and better validation leading to fewer errors and a reduction in preparation time.
- Sharing of income and assets (depreciable and CGT) between returns.
- Automatic updates to all returns in complex distribution trees.
- Real time validation and estimate feedback as you enter a return.
- Detailed worksheets and complex calculations.
