

Quickbooks / PM and PIQ Integration

QuickBooks is fully integrated with Practice Management and Practice IQ

QuickBooks allows you and your client to access company data files anywhere, anytime over the internet, with the full functionality of QuickBooks Enterprise.

The **Advance PM / QBi Enterprise integration** adds entirely new dimensions to your practice. Day-to-day data entry becomes more simplified and generates fewer errors – because an entry into Advance PM syncs directly with your QuickBooks Enterprise database. This eliminates the need to enter data more than once. End of month procedures become a breeze with your firm's data from QuickBooks Enterprise being posted directly into the Advance Practice Management ledger, instantly updating your financial reports.

For added integration, you can now post a general journal directly from **Advance PIQ** back into the QuickBooks ledger. Both these integrations can be automated to run as often as you like. Many of our clients are utilising these features to increase their efficiency and save them huge amounts of time and money.

With the Advance / QBi Enterprise integration scalable from one to many entities, you can be sure that this system will become ever more useful as your firm – and your client base grows.

Key Features

- Improved disbursement workflow
- Post disbursements directly to Advance PM from QuickBooks
- Uses everyday software (Microsoft Excel)
- Customisable by company/ division
- Supports multiple company entries
- Security Alerts to ensure no duplication of entry

Key Benefits
